

Week 4 - Individual Reflections

What do I want to learn or understand better?

During this sprint we had some trouble with our user story, we thought it would require 5 hours but after 8 hours we had not even come close to a solution. This was an eyeopener for me and had made me want to understand what we missed when estimating. I also want to learn how to solve it, because I think it will be useful to know.

I think the way to learn it is by looking at more tutorials and by discussing with the group.

This week it was my turn to be a scrum master. I think this is a role that you get better at for each time and I want to learn how to be a good Scrum master that can guide the team in a good way and solve problems on the way. Hopefully, I will get to try it again during this project and learn even more about. I think that if I get the chance to do it again, I will do more research and make up a plan for myself about what I want to do and what I want to learn.

How can I help someone else, or the entire team, to learn something new?

This week it will be more java programming which have more experience in and maybe I will be able to learn my partner something. During this last sprint, me and my partner used a function in zoom where we could allow each other to control the others computer. I think this was a great function and I will bring it to the next sprint.

What is my contribution towards the team's use of Scrum?

I have been one of the scrum master this week and held a few meetings and controlled that we moved forward. Despite that, my contribution to the use of Scrum is that I have been active and tried my best when we, together, wrote all of our user stories, tasks and acceptance criteria.

My part of the Scrum board this week was the user story:

"3.6 As a user I want to be able to see a check box before the company name in "my favorites" list on my page so that I more easily can change the status about them."

which I did with Linnea. We had some serious problem solving this and we ended up not being able to solve it.

What is my contribution towards the team's deliveries?

We have been working together and I been active during all our sessions. We had the same arrangement when writing the team reflection this week, but this week I collaborated with Linnea.

I have also taken notes during our supervision meeting.

Elin Nilsson

Even doe me and Linnea didn't complete our user story for this week, I think that we learned a lot by getting a us that wasn't possible for us to solve. We did a lot of research and found things that can be useful later in the project.
