

Individual reflection week 5 - Norbert Laszlo

What do I want to learn or understand better?

- **A:** Upon till now we have had fairly large user stories. So much so that a programming pair only completed 1 or 2 user stories a sprint. A reason for this slow pace is due to that none of us were comfortable with android studios and therefore a user story usually took 2 or 3 times the time that it should've in normal conditions
- **B:** To've improve our divide and conquer strategy so that we have smaller user stories that only take a couple of hours each.
- **A→B:** In our next sprint planning session we should plan user stories that are smaller and easier to complete in a shorter time so that a programming pair can complete more user stories per sprint.

How can I help someone else, or the entire team, to learn something new?

- **A:** I probably have the most experience in the group when it comes to developing apps or services and today I don't really feel like we work efficiently when it comes to synchronizing our work or design decisions.
- **B:** To have better synchronization when it comes to design decisions and working from a user experience perspective.
- **A→B:** Lift the question of synchronized design choices and to think more about the users experience of our application.

What is my contribution towards the team's use of Scrum?

- **A:** We have to change and improve our user story planning for each sprint.
- **B:** To have changed our strategy of working with user stories.
- **A→B:** Have a discussion about this in our next sprint planning session.

What is my contribution towards the team's deliveries?

- **A:** We don't really have a well working merging strategy for the long term.
- **B:** Implement a better merging strategy for the end of each sprint.
- **A→B:** In the next sprint we should lay down a better strategy of the process of merging new functionalities to our app.
