

## Individual reflection week 7 - Norbert Laszlo

What do I want to learn or understand better?

- **A:** Not enough testing done.
- **B:** To have better code quality in sense of tests.
- **A→B:** Improve our quality through more testing.

How can I help someone else, or the entire team, to learn something new?

- **A:** I probably have the most experience in the group when it comes to developing apps or services and today I don't really feel like we work efficiently when it comes to synchronizing our work or design decisions.
- **B:** To have better synchronization when it comes to design decisions and working from a user experience perspective.
- **A→B:** Lift the question of synchronized design choices and to think more about the users experience of our application.

What is my contribution towards the team's use of Scrum?

- **A:** We have to change and improve our user story planning for each sprint.
- **B:** To have changed our strategy of working with user stories.
- **A→B:** Have a discussion about this in our next sprint planning session.

What is my contribution towards the team's deliveries?

Being what we call the merge master. That is the person having the best overview of the code and therefore making the decision in case of conflicts.
