

# Reflection Week 3 - Oscar Helgesson

## **What do I want to learn or understand better?**

We started the first sprint this week and I feel good to finally get started. I want to better understand Android Studios, as that is the IDE we are using. Furthermore, when we estimated the user stories this sprint we thought something that showed itself to be quite trivial was a lot harder and therefore chose a few to few user stories. This has showed me that I want to become better to estimate the difficulty of user stories.

I have also realised I want to achieve better knowledge about the product owner and scrum master role so when it is my turn to be them I will have a better understanding of what to do and do a better job.

## **How can I help someone else, or the entire team, to learn something new?**

As I mentioned earlier I still want to learn more about Android Studios but I still have more than enough knowledge to still help my team learn more about actually coding in it. I still also still believe I can help the team learn how to solve conflict within the group if such would arise.

I have also, apart from the sprint work and meetings, been spending some time searching for how we can effectively do remote-work together. I have been looking at different kinds of software and frameworks to follow in order to make it as easy as possible and can help share my knowledge with the team.

Lastly I also have experience using Git, something not everyone has as much experience within, which I can use to help those that needs it. I can help through guiding someone through the Git process but I can also help fix potential problems that easily can appear when using Git.

## **What is my contribution towards the team's use of Scrum?**

My contributions have been in different areas of the use of Scrum. I have with my previous knowledge from courses and reading about Scrum helped when questions have appeared. I have helped with the sprint planning and formulating the user stories and of course been apart of the actual sprint. Furthermore I (of course not only me) have been apart of remembering the team to not forget about certain parts and been apart of work important to Scrum, such as estimating the backlog item, formulating the acceptance criteria and definition of done.

**What is my contribution towards the team's deliveries?**

I have contributed by being a part of setting up the project, the project structure and other things like the .gitignore file in order to get everything going. Beyond that, me and my coding partner have done our user story that we have been assigned, that was to create a list where the user of our app can find all the companies and scroll through them on a particular page. After that I have helped two other pairs finish their user story as well since I had some knowledge in those areas and finished early. I have also sent an email to our examiner and lecturer asking whether we can submit our team reflections on Monday.

I have also been active in all team meetings, such as our stand-up meetings and our meeting with the stakeholder.
