

Individual Reflection Week 7

Cecilia Michelsen

What do I want to learn or understand better?

After finished the project I feel that I have learned a lot, especially about agile practices, and I want to continuing my learning of this for future work. Next project I would like to have one Scrum master during the whole project, and compare to how it was when sharing the role. I also want to learn even more about Android Studios. The final team reflection is valuable for me now to reflect about what we have done, and what we might do differently for future projects.

How can I help someone else, or the entire team, to learn something new?

This is the last sprint so we have now finished the project. For the final team reflection we can all learn each other about what we might do differently in a future project.

What is my contribution towards the team's use of Scrum?

This week I have been active during the last planning meeting and stand-up meeting. I wrote tasks and acceptance criteria's for the user stories together with the team. I have also been taking notes during the meeting with the supervisor. I had the same roles as last sprint; as a developer and as a product owner shared with the rest of the team.

What is my contribution towards the team's deliveries?

The last sprint I worked on two user stories together with Elin and we managed to complete them:

- 5.5 As a user I want to see a logo at company details page to recognize the company
- 5.4 As a user I want to be able to easily see what students a company is looking for and what they offer on the company detail page

These two user stories was added after meeting with the stakeholder, which make them add much value to the customer, and the result turned out very well. Further I discussed this week's team reflection together with the group and wrote parts of it.
