

## **Individual reflection - Rebecka Jakobsson**

### **What do I want to learn or understand better?**

I look forward to getting to learn more about how to work in a project when it comes to programming since all projects I've done during my years at Chalmers has been part of economical courses. I want to learn more about what it actually means to work with Scrum and how to do it in an agile way. I also look forward to work on a real-life case that can end up being useful for someone.

### **How can I help someone else, or the entire team, to learn something new?**

I think that I can help the team with the organization of the project. I also hope that I can contribute with new ideas and ways to solve problems that will come up. I hope that I will be able to help with programming issues as well. At the same time I think that the IT students may be more prepared for this but I will do my best to contribute with my knowledge.

### **What is my contribution towards the team's use of Scrum?**

Since we haven't started to use Scrum yet I can't say anything about my contribution towards the team's use of it. But as previously mentioned I look forward to learn more about it and work with it.

### **What is my contribution towards the team's deliveries?**

This week I've contributed with ideas for the project as well as for the social contract. I've also been part of leading the discussions we've had on Zoom to make our meetings more efficient. I will continually do my best to reach our goals stated in the social contract and I think that we as a group have a great potential to achieve this together.
