

Individual Reflection, WEEK 1

Linnéa Fransson

- what do I want to learn or understand better?

I want to improve my coding skills. I have never made an app before and I'm looking forward to see how this project will end up. I think all team members have different skills and will learn from each other. We will definitely face some problems during the way, that will give us useful experiences for the future.

I also like the idea of mixed teams with people from different programmes and that we don't know from before. This will be a practice for future workplaces. With new tools and different ways of working, we can develop the group dynamic and optimize our capacity. I'm really looking forward to be able to bring value for a customer but also get to learn new things!

- how can I help someone else, or the entire team, to learn something new?

With my background from Industrial Engineering & Management, I have a broad knowledge of economics, technology and software. Hopefully, I can see things from another perspective and maybe not the problems within the details. I have had a lot of contact with different companies before and can maybe be able to see their struggles and what kind of features who brings value to them. I also hope to bring new ideas and help the group to solve problems.

- what is my contribution towards the team's use of Scrum?

I did not know about Scrum before this course and I think I have to read more about the topic to give a good answer on my contribution towards the team. We will also talk more about Scrum in class next week. But as I said before, I'm looking forward to learn more.

- what is my contribution towards the team's deliveries?

I have been engaged in this week's meetings with discussing things to be able to move forward. I have been coming up with ideas to app but also to the social contract. I also been done some shared documents for meetings and lists. I will always do my best and I think we have a good and educational journey in front of us!
