

Reflection Week 2 - Oscar Helgesson

What do I want to learn or understand better?

As we still haven't started our first sprint most of the things I wrote last week still applies. I have gotten a deeper understanding of the Scrum framework this week and want to better understand how to apply it in practice during the next and following weeks. I also want to learn how to write really good user stories and start practicing doing that.

I also very much look forward to learn how to develop an Android app as that is something I haven't done before.

How can I help someone else, or the entire team, to learn something new?

My previous experiences with coding and programming I think will be helpful to the rest of the group during this project. Furthermore my practical experience with Scrum from previous courses (limited) can be beneficial during the project. On top of this I have also done some research myself asking people I know how they work with Scrum that I think will be helpful.

I also aim to, when we don't have any meetings planned, prepare myself for future problems that may present themselves by watching videos and tutorials so that we can solve them more efficiently.

What is my contribution towards the team's use of Scrum?

As I mentioned last week I was going to read about Scrum and I did which I think will be greatly beneficial to our process. I will of course, just like everyone else in the group, be apart in discussion about different roles and the actual implementation of scrum but since we haven't yet started our first sprint there is not much more we can do at this moment.

What is my contribution towards the team's deliveries?

I have participated in our meetings and been active during discussions and helped choose a new idea and move our project forward. I have also been discussing and formulating our project scope and sketched our mock-up. I also reached out to potential stakeholders but with limited success.
