

Individual reflection - Rebecka Jakobsson

What do I want to learn or understand better?

Since we did our first sprint this week we have just started to get to know Android Studios which we will use for our project. In the upcoming sprints I want to learn more about how to use Android Studios in the best way possible and get to know how the program works even better. I also want to learn more about how to get the most use of having a scrum master and a product owner and how that roles should be contributed in the tema.

How can I help someone else, or the entire team, to learn something new?

I can help the team/my coding partner to learn new things with help of my knowledge from previous IT courses as well as from looking up new information through google and youtube. I will also be able to help the team organize the work that should be done each spring.

What is my contribution towards the team's use of Scrum?

This was the first week using the Scrum method. I was part of developing user stories, breaking them up to tasks and coming up with acceptance criterias. The whole team shared the role of the product owner which meant all of us were part of the meeting with our stakeholder which I thought went really well since we all learned what she considered most valuable.

Further, I was one of two scrum masters. In my case it meant that I prepared the team reflection before our meeting and tried to contribute in organizing our meetings in Zoom. For future sprints, we need to develop the responsibility of the scrum master more concrete so that it gets more clear what the role means. I was also part of finishing a user story together with Oscar which went well. This week he had prepared a bit more before we started coding which led to that I was the one coding while sharing my screen and he was the one searching for information.

What is my contribution towards the team's deliveries?

This week me and Oscar developed a scrollable page where all companies will be found further on. From this page the company detail pages will be reached further on. I was as mentioned earlier also part of being the product owner as well as the scrum master which I think went well considering this was our first sprint ever.
