

Reflection Week 7 - Oscar Helgesson

What do I want to learn or understand better?

This sprint was the last sprint in the project. Before the project I had never developed in Android Studios and even though I have learnt a lot I still feel like there is more I want to learn. To keep coding in Android Studios and learn more will enable me to keep learning and getting a deeper understanding of working in Android Studios. It would also have been fun to learn how to create some sort of admin-setting for the stakeholders to use. We did not have time for this but this is really something I would like to learn how to create. Creating this in another project course or by myself as a learning opportunity would be a great way to achieve this.

We all got to spend time as the product owner in this course but I'd like to better understand how it is to be the sole product owner for an entire project. Doing this in an own project, another school project or in my professional life will however provide me with opportunities to do this.

How can I help someone else, or the entire team, to learn something new?

I spent a lot of time this project searching and learning about Android Studios in general. Specifically, I, during this course, got very specific knowledge about how to read from json-files on an android device, but also how to read and write to app-specific files. If anyone I will ever work with in the future will encounter this problem, I can give them guidance on this matter. I can of course still get better with Android Studios and I hope that through my future experience that I can gain an even better knowledge about Android Studios and being able to help others understand it

In the future I can help others, either in others school projects or my professional life, working in an agile way using the Scrum framework.

What is my contribution towards the team's use of Scrum?

I was co-product owner with the rest of the group and was active in the meeting with our stakeholder. During the sprint planning meeting I helped pick out and estimate user stories and formulate tasks. I tried to push towards more efficient meetings and a more smooth workflow. I still wished we had more efficient sprint reflection and planning meetings and if I were to redo the project I would made sure we had a smoother workflow during the entire sprint.

I was active in the reflection session and reflected about what has worked well not only last sprint, but during the entire course. Lastly, I was also assigned two user stories that were completed and provided value to the stakeholder.

What is my contribution towards the team's deliveries?

Last sprint me and my coding partner completed the two user stories assigned to us. We completed the user stories slightly faster than estimated due to really efficient work and I felt as this is the last week that I could do some finishing touches like commenting on code lacking proper documentation and doing some small refactoring to better follow the design patterns we have chosen.

I have been in meetings discussing how we can solve different problems, and helping other with problems how they can solve them. I have also together with the group written the Team Reflection for this week.
