

**Individual reflection - Rebecka Jakobsson****What do I want to learn or understand better?**

I want to learn more about how to plan user stories beforehand so that they get doable but at the same time as challenging and time consuming as planned. This upcoming week we will start checking our code quality by using pull-requests and examine each others work. I'm not really sure of how that works but hopefully I'll learn it this upcoming week.

**How can I help someone else, or the entire team, to learn something new?**

This last sprint me and my coding partner fixed some visual design but also learned how to take in information from a JSON document and get that information "published" in a specific fragment. I can contribute with my knowledge in those areas in future sprints. Further I can help my next coding partner by being prepared before we get started on the new user story and by sharing the workload so that we can finish as planned.

**What is my contribution towards the team's use of Scrum?**

As previous I've been part of planning the upcoming sprints by deciding which user stories we are about to do. I've helped breaking them down into tasks, putting up acceptance criterias and estimated the time and points each user story takes. I've also done my part of what was put in the sprint backlog together with my coding partner. Further, I've been active during our meeting and tried to contribute on the stand up meeting.

**What is my contribution towards the team's deliveries?**

This week me and my coding partner wrote a lot of java code and methods which will be useful to make sure the right information appears when clicking on a specific company in the company list. We also fixed the detailed company page so that the design got more user friendly. In the detailed company page we have also made sure only relevant programs and offerings are presented for each company. We've also added a heart that further on will be clickable to "save" the companies students find most interesting. As mentioned before I was part of planning the sprint and the other user stories as well.
