

Reflection week 1

- What do I want to learn or understand better?

I'd like to learn about how to work in a agile work environment and how to plan a project in a the agile way.

- How can I help someone else, or the entire team, to learn something new?

I'm quite comfortable with web application development and could help out there (especially in the beginning), if we would to choose to build our idea on a web based platform.

- what is my contribution towards the team's use of Scrum?

I honestly don't know much about Scrum, we've touched on it in a previous course so I know what it is all about in the big picture. I will try to follow the principles as well as I can and have a clear and transparent workflow so that we can give feedback to each other often. This so we make sure that we're still on track and that we do things the way it was meant to be done.

- what is my contribution towards the team's deliveries?

Make sure that after each sprint we still have a working software after the added features etc. Also that all the planned task in each sprint are completed before we move on to the next one.
