Individual reflection - Rebecka Jakobsson

What do I want to learn or understand better?

I feel like I've learnt a lot these four sprints and that we have gotten a lot better in estimating, creating and pairing good user stories together. I still consider it pretty hard to check code quality so for this last upcoming sprint I aim to understand how to do that in a good way.

How can I help someone else, or the entire team, to learn something new?

I can help my coding partner by contributing to our work with the user stories we will be responsible for. From this last sprint I can help the rest of the team with my knowledge on how to transfer information from one fragment to another.

What is my contribution towards the team's use of Scrum?

I've had the same roles as the last sprint. I've contributed in the shared role as the product owner since I'm aware of what our stakeholder demands. I have also been part of planning the sprint, creating user stories etc. Further, I've almost fulfilled my user story together with my coding partner, like two other coding pairs we had some problems with the json document.

What is my contribution towards the team's deliveries?

This week me and my coding partner created a listener for clicks in the company list so that the fragment switches to the company details page. Further we made sure all the right information was forwarded to the next fragment considering the clicked company's id. We also edited the layout for the company page so that all information was viewable.
