Individual reflection - Rebecka Jakobsson

What do I want to learn or understand better?

This week we did our second sprint and me and my coding partner had to deal with a very challenging user story which we in the end couldn't solve. Therefore I want to learn more about how to create better user stories and get better in estimating how challenging they will be. Further I want to learn more about how to create valuable KPI:s so that we can estimate and evaluate our work in a better way.

How can I help someone else, or the entire team, to learn something new?

From my experience gathered this sprint, I can help my team to create a better understanding of the degree of difficulty of different tasks and user stories. I can also help my coding partner by contributing to our user story, either by being the one coding our the one searching for information this upcoming sprint.

What is my contribution towards the team's use of Scrum?

This sprint I helped to create user stories and break them into tasks. I was also attending the group's meeting with our stakeholder so that I was aware of her opinion on our plans. I was also, as mentioned before, working on a user story which we unfortunately couldn't solve.

What is my contribution towards the team's deliveries?

My contribution to the team's deliveries this sprint is mostly that I was part of planning and organizing the sprint together with the team. I was also one of the person's who found out what it can be like to get stuck on a user story, that knowledge will hopefully contribute to future sprints so that we will create better user stories.
