# Individual Reflection Week 4

Cecilia Michelsen

**What do I want to learn or understand better?**

Since we struggled with some of the user stories this week I want to learn more about how you should write and estimate user stories to avoid this problem. The estimation of a user story in relation to KPI is something I need to keep in mind, and that we as a team need to think through for the next sprint. As mentioned in the past individual reflections I want to continue to learn Android Studios and its features. By watching tutorials and working on the user stories this will be a continuous learning process.

**How can I help someone else, or the entire team, to learn something new?**

This week Oscar and I worked on a user story where we created a class for companies. By using a JSON-file we can now import company information from the JSON document and use the information as a string. If someone needs help with this function I will be able to step in.

**What is my contribution towards the team's use of Scrum?**

This week we worked on the second sprint and I have been a part of the meetings when planning and discussing the sprint. I had the same roles as last week; as a developer of a user story, and as a product owner shared with the rest of the team. Therefore I was a part of the meeting with the stakeholder and wrote notes and worked on my user story together with my coding partner.

**What is my contribution towards the team's deliveries?**

During the second sprint I was working on creating a class for companies together with Oscar as mentioned above. We also managed to import company details from an external JSON file. Thereby my main contribution to the teams work this week is that I have completed the user story together with my coding partner. As mentioned above I have also been writing user stories together with the team and been a part of all the meetings, including the meeting with the stakeholder. I have also been writing the Team reflection together with the group.
