Reflection Week 1 - Oscar Helgesson

What do I want to learn or understand better?

I want to better understand how to work in an agile way and be apart of a project where we will deliver value to an external actor. I also want to learn how to work according to Scrum. Furthermore I look forward to better understanding and develop my skills as a programmer while working in a team.

In the coming week I particularly want to understand better how to work according to the Scrum framework.

How can I help someone else, or the entire team, to learn something new?

I think I can help other members of the group in certain aspects of coding and programing. I also think I can help come with multiple ideas and reflections on how to make our product more valuable to the stakeholder. I have in the past studied courses in leadership and group dynamics and can help the group reacher higher levels of efficiency and solve potential arguments that could emerge.

What is my contribution towards the team's use of Scrum?

As we haven't yet started working with the product I haven't yet given much contribution but I have some experience with it from previous courses that could be of use. However I will also read more, before we start working on the project, about how to work according to Scrum and therefore come with knowledge that I can share with the rest of the group.

What is my contribution towards the team's deliveries?

So far I have shared my ideas and given my feedback on other ideas that we have discussed and have, just as everyone else, been active in discussions during zoom-meetings such as during the construction of our social contract. I have also reached out to potential stakeholders.

In the future I think my contribution will be in many areas but specifically in the actual coding department and helping to improve our idea and product.
