Individual Reflection Week 3

Cecilia Michelsen

What do I want to learn or understand better?

This week we have stared our first sprint and therefore begun to work with the user stories in Android Studios. Since this is the first time I am using this program I want to learn more about it, its possibilities and functions. Further I want to understand the Scrum master role better and continue to learn more about the agile practices.

How can I help someone else, or the entire team, to learn something new?

When coding in pairs in Android Studios we sometimes encountered problems. The website for developers on Android contains lots of information about the program. By reading and looking for information there, and by watching tutorials, I might be able to help solving issues in Android Studios.

The user story my coding partner and I worked on this week included a scroll view and a nested scroll view. We faced some problems when implementing the nested scroll view but managed to make it work. Looking forwards to upcoming sprints I can help someone else with this feature if necessary.

What is my contribution towards the team's use of Scrum?

This week we structured the project by the use of Scrum. I contributed to the teams formulation of epics, user stories, tasks and acceptance criteria. Since the whole team shares the role as product owner I participated during the meeting with the stakeholder. Then all the team members gained information about value creation for the stakeholder. I wrote notes during the meeting and we discussed possible changes in the layout and functions in the app.

What is my contribution towards the team's deliveries?

During the first sprint I was working on the page for company details together with Jacob. We managed to make a structure for the design of the company details page. Also the view is scrollable and has a nested scrollable view for users input at "Notes". Thereby my main contribution to the teams work this week is that I have completed the user story together with my coding partner. As mentioned above I have also been writing user stories and tasks for the whole project together with the team and been a part of all the meetings, including the meeting with the stakeholder.
