Individual Reflection, WEEK 6 (SPRINT 4)

Linnéa Fransson

• What do I want to learn or understand better?

I feel that I have learned a lot during the four sprints. I have more knowledge about Scrum and how to use it. I am also better in creating user stories and coding in Android Studios. But I think I want to learn more about checking code quality, especially using unit-testing.

• How can I help someone else, or the entire team, to learn something new?

From my experience of this sprint, I have learned more about saving information even if the app is closing. So I hope I can further help my partner with coding, with either coding by myself or search up the right information that could help us.

• What is my contribution towards the team's use of Scrum?

This was the fourth week of using Scrum and I had the same roles as previous weeks, but also a shared Scrum master role with Cecilia. We held all of the meeting and had the responsibility to drive the project in the right directions. Me and Cecilia formed the user stories and tasks for this week, with a lot of good input from the team members. As last week, I was a developer of an user story, but also a product owner shared along the others in the team. We had the fourth meeting with our stake holder. We showed her our result from the third sprint and our plans for the forth. She had to answer some questions for our KPI:s and user satisfaction and she seemed to be happy about it. My work as a developer is more described in the next question.

• What is my contribution towards the team's deliveries?

The forth sprint was done this week. I was teamed up with Oscar to do a two user stories that were described as:

- "As a user I want to be able to write and see my notes for each company to remember my conversation with"
    - o Acceptance criteria: Be able to see my saved notes
    - o Task included: Add a function for saving notes on shutdown
    - o Estimated: 4,5 h and 6 p
    - o Result: 2 h and 5 p
- "As a user I want to see information about companies at the Company details page".
    - o Acceptance criteria: Have real companies information in the company list

- o Task included: Add company details in JSON document
- o Estimated: 1 h and 1 p
- o Result: 3 h and 1 p

We worked together over Zoom and used the screen sharing function to be able to code at the same time. We managed to solve both of the user stories, but the estimation of time was a little problem. We saved all of our work and have merged it together with the others. I have also been engaged in this week's meetings with the team. I have been participating in discussions and came up with new ideas and user stories.
