Individual Reflection, WEEK 7 (SPRINT 5)
Linnéa Fransson

• What do I want to learn or understand better?

I feel that I have learned a lot during this course. I have more knowledge about Scrum

and how to use it. I am also better in creating user stories and coding in Android Studios. But

I think I have to write more code to get better at it.

• How can I help someone else, or the entire team, to learn something new?

The project is now over and I hope I can from this experience in this course, learn others and

have knowledges to the future courses and working life.

• What is my contribution towards the team's use of Scrum?

This was the fifth week of using Scrum and I was a developer of user stories, but also a

product owner shared along the others in the team. We had a last meeting with our stake

holder. We showed her our final result and she seemed to be happy about it. My work as a

developer is more described in the next question.

• What is my contribution towards the team's deliveries?

The fifth and last sprint was done this week. I was teamed up with Tina to do a two user

stories that were described as:

-   "As a user I want to be able to see my favorite companies that I have chosen even if
    the app has been closed and reopened"
    -   Acceptance criteria: Be able to see that favorites will load correctly when
        starting the app
    -   Task included: "Take inspiration from saving notes" & "Develop the code so it
        works for favorite companies"
    -   Estimated: 1,5 h and 2 p
    -   Result: 4 h and 2 p

-   "As a user I want to be able to see the whole page on the company list page to be able
    to scroll down and see everything".
    -   Acceptance criteria: Be able to see all companies in the company list

- Task included: Make sure it's possible to scroll through the whole list & Change constraints so that they are correct & Add companies to make sure it works
- Estimated: 2 h and 3 p
- Result: 1 h and 2 p

We worked together over Zoom and used the screen sharing function to be able to code at the same time. We managed to solve both of the user stories, but the estimation of time was a little problem. We saved all of our work and have merged it together with the others. I have also been engaged in this week's meetings with the team. I have been participating in discussions and came up with new ideas and user stories.
