Individual Reflection Week 1

Cecilia Michelsen

What do I want to learn or understand better?

For this project I want to improve my programming skills in a new context. I am looking forward to develop an application for an external stakeholder and to create value for them. Since this is the first time I am working on a bigger project in java I will definitely learn more about the different working processes. I am also looking forward to work with this project as a team with group members from another program, and to exchange knowledge.

How can I help someone else, or the entire team, to learn something new?

I have had lots of different projects before that includes external stakeholders so I can contribute with how to organize the project with the value creation in mind. I may also see the project from a different perspective, and will hopefully come up with new ideas when solving a problem. I will contribute with my knowledge in economics, coding and technology in the best way as possible.

What is my contribution towards the team's use of Scrum?

Since this is the first time I am using Scrum I will do my best to learn how it works. For now my contribution towards the team's use of Scrum will therefore include reading about Scrum so I can learn how to use it.

What is my contribution towards the team's deliveries?

This week I have created a Zoom channel for the group and have been a part of the discussions during meetings. I also came up with ideas for the app and contacted an external stakeholder.
