Individual reflection - Rebecka Jakobsson

What do I want to learn or understand better?

I want to learn more about how to work in sprints and with scrum. I also want to understand how to use GitHub to enable a project like this and how GitHub makes it easier. Further I look forward to learn more about Android Studios where my group will be developing our project.

How can I help someone else, or the entire team, to learn something new?

From my courses in Java coding I will help the team by being part of developing the app. I will try to find solutions to problems that comes up with my perspective from my economical background.

What is my contribution towards the team's use of Scrum?

Since we haven't started to use Scrum yet I can't say anything about my contribution towards the team's use of it. But as I mentioned before I look forward to learn more about it.

What is my contribution towards the team's deliveries?

This week I have been part of planning and developing our new idea with the group. For the project scope me and Linnéa broke down our idea into the Business Model Canvas to point out stakeholders, value proposition, partners etc. I was also part of choosing which design we should use for the app.
