What do I want to learn or understand better?

I would like to understand more precisely how our contact and communication with our external stakeholder will be like once we start coding and doing sprints. This is something I will learn by doing once we start the sprints.

Also I would like the team to continue the discussions of our product to get a more clear picture of all the services it will offer and how to navigate through the app (the design). All of this will obviously be more clear as time goes and as we continue to work together.

Also I have never developed an android app before and I am looking forward to learning that. I will be learning that by doing and doing some research.

Lastly I would like for the group to talk more about how we will implement Scrum in our project so that we all get a better understanding of that.

How can I help someone else, or the entire team, to learn something new?

Since I have taken the course Object Oriented Programing Project, I already have written epics, user stories and tasks for a project before. I can, using my experience from that course, help someone or the entire team to not make the same mistakes we did in the beginning of that course. Of course this course dives further in the process of using user stories and such tools and we all together will discover new and better ways to write them as well as we will make new mistakes and learn from them.

What is my contribution towards the team's use of Scrum?

To go back to the first question of me expressing that I would like to get a better understanding of how we will implement scrum, my contribution is and will be to get a conversation starting of how we will use the roles of scrum master and product owner in our project. But since we have not begun the actual sprints yet, I don't think there is more to contribute with at the moment.

What is my contribution towards the team's deliveries?

My contribution so far has been to participate in the work we do to develop the mockup and the project scope. If we get stuck or go in circles I try to change approach or direction.

Furthermore I contacted someone from the DatE-IT crew who we wanted as our external stakeholder and now have contact with her and I am regularly updating her about how the project will be, what we are trying to develop and other important things for her to know, as our stakeholder.
